

# STANDARD CONCRETE STATE MIX TURFGRASS SEED

40% KENTUCKY BLUEGRASS

35% CREEPING RED FESCUE

25% PERENNIAL RYEGRASS

\*\*SEEDING RATE 5-8 LBS. / 1000 SQ.FT.

- KENTUCKY BLUEGRASS –Known for its dark rich color, fine texture, cold & stress tolerance. Ideal for medium to high maintenance applications. Plants spread laterally by a unique system of underground stems or rhizomes. This knitted rhizome network holds the turf together for better performance.
- CREEPING RED FESCUE-- This turf species is shade & drought tolerant. This fescue performs well as a low maintenance mix. Its fine leaves will lose less moisture in hot sunny weather. Fine fescue growth habit spread through rhizomes.
- PERENNIAL RYEGRASS—Principally known for its quick germination and rapid establishment. Improved turf types have dark green, fine textured leaf structure that is wear tolerant and is well adapted for home, commercial lawns, parks, athletic fields and golf courses. Will grow in a wide range of climates & conditions.
